Illogical Diagnosis Code Relationships

V0084 HIV DISEASE WITH HIV TEST RESULTS

Guideline: A positive antibody test does not identify the presence of HIV infection; it indicates only that HIV antibodies are present. Patients previously diagnosed with any HIV illness (042) should never be assigned with codes 795.71, 795.8, and V08.

V0084 Exclusive check (if match, error) - Z004

Relational Table	V08.	Asymptomatic human immunodeficiency virus [HIV] infection status <i>effective 10-1-94</i>
	795.71	Nonspecific serologic evidence of Human Immunodeficiency Virus [HIV] <i>effective 10-1-94</i>
	795.8	Positive serological or viral culture findings for Human Immunodeficiency Virus (HIV) <i>prior to 10-1-94</i>

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0086 CANCER RECURRENCE versus HISTORY OF CANCER AT THE SAME SITE

Guideline: When the malignant neoplasm recurs after it has been excised or eradicated, it is coded as a malignant neoplasm of the stated site. Note that a code from the V10 category, History of malignancy, is not assigned when the neoplastic disease has recurred. For example, a primary carcinoma of the anterior wall of the urinary bladder that has been excised but has recurred in the lateral wall is coded to 188.2.

When a recurrence is discovered at the primary site, it should be coded as primary to that site. When there is no recurrence at the primary site but there is evidence of a malignancy at a secondary (metastatic) site, the code for the secondary site should be assigned along with a code from category V10 to indicate that the malignancy at the primary site has already been eradicated. Note that a code from category V10, Personal history of malignant neoplasm, is assigned as an additional code only when the malignancy has been excised or otherwise eradicated and is no longer under treatment.

Note: Some edits were turned off until further response is received from Coding Clinic for ICD-9-CM.

Illogical Diagnosis Code Relationships

V0087 UNCOMPLICATED DIABETES versus COMPLICATED DIABETES

Guideline: Uncomplicated diabetes (250.0x) cannot be coded together with diabetes with complications or manifestations. The fourth digit identifies the presence of an associated complication. Coding diabetes as both complicated and uncomplicated is contradictory and distorts statistics.

V0087 Exclusive Check (if match, error) - X001

	250.9	Diabetes with unspecified complications

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0088 SICKLE-CELL ANEMIA WITH SICKLE-CELL TRAIT SHOULD BE COMBINED

Guideline: The difference between the sickle-cell anemia and sickle-cell trait is the development of symptoms of sickle-cell anemia.

Sickle-cell anemia is due to the transmission of a defective gene, which results in the formation of an abnormal hemoglobin molecule.

When this defective gene is transmitted from only one parent, the condition is called "sickle-cell trait," and often no symptoms of sickle-cell anemia develop.

When the diagnostic statement includes both sickle-cell trait and sickle-cell anemia, only the anemia should be coded. Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved. Read the "Excludes" note under code 282.5.

V0088	Exclusive Check (if match, error) - X002

	282.69	Other sickle-cell anemia
Relational Table	282.5	Sickle-cell trait

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0089 HYPERTENSION versus OTHER HYPERTENSIVE DISEASES

Guideline: Categories 401-404 classify hypertensive disease of unknown cause according to a hierarchy of the disease from its vascular origin (401) to the end-organ involvement (heart, kidney, or heart and kidney combined).

Only the combination code is assigned when that code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement.

V0089 Exclusive Check (if match, error) - S001

	404.9	Hypertensive heart and kidney disease, unspecified

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0090 HYPERTENSIVE HEART DISEASE and HEART DISEASE

Guideline: Certain heart conditions are assigned to a code from category 402 when a causal relationship is stated (due to hypertension) or implied (hypertensive). Use only the code from category 402.

Only the combination code is assigned when that code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. See "Includes" note under category 402 which states "*any condition classifiable to 429.0-429.3, 429.8, 429.9*". Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement.

	402.91	Hypertensive heart disease with heart failure, unspecified

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW091 HYPERTENSION and KIDNEY DISEASE

Guideline: *ICD-9-CM* assumes a cause-and-effect relationship between hypertension and renal disease when both are listed in the diagnostic statement; the relationship need not be stated. A fifth-digit subclassification is provided for category 403 to indicate whether renal failure is present. Examples: Hypertension (401.9) and renal failure (585) are to be assumed as related and should be coded as 403.91 regardless of whether it stated "due to," "with," or listed separately.

Only the combination code is assigned when that code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Unless specified by ICD-9-CM codebook, multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. See "Includes" note under category 403 which includes *"any condition classifiable to 585, 586, or 587 with any condition classifiable to 401"*.

Exception: *This guideline can be overridden if the physician specifically states that the hypertension is not due to the renal disease.*

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0092 HYPERTENSIVE HEART and KIDNEY DISEASE

Guideline: When a heart condition ordinarily coded to category 402 and a renal condition coded to category 403 both exist, a combination code from category 404 is assigned. Fifth digits are provided to indicate whether congestive heart failure, renal failure or both are present.

Only the combination code is assigned when that code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Unless specified by ICD-9-CM codebook, multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. See "Includes" note under category 404 which includes *"any condition classifiable to 402 with any condition classifiable to 403"*.

V0096 DIVERTICULOSIS and DIVERTICULITIS

Guideline: The diagnosis of diverticulum or diverticulosis preceded by qualifying terms of "acute," "perforated," or "ruptured" designates diverticulitis and not diverticulosis.

Diverticula, diverticulosis, and diverticulum described as acute, perforated or ruptured should be coded as diverticulitis, such as 562.11 or 562.13 for colon and 562.01 or 562.03 for small intestine.

Diverticulitis is a complication of diverticulosis. A diagnosis of diverticulitis assumes the presence of diverticula; only the code for diverticulitis is assigned, even though both conditions may be mentioned in the diagnostic statement. In the Tabular Section, read the coding instructions under 562.00 - 562.13.

V0096 Exclusive check (if match, error) - X018

Diagnosis Table	562.00	Diverticulosis of small intestine [without mention of hemorrhage]
	562.02	Diverticulosis of small intestine with hemorrhage

	562.13	Diverticulitis of colon with hemorrhage

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0097 DIVERTICULOSIS and DIVERTICULITIS, WITH and WITHOUT HEMORRHAGE
– WHICH IS IT?**

Guideline: A diagnosis of diverticulitis assumes the presence of diverticula; only the code for diverticulitis is assigned, even though both conditions may be mentioned in the diagnostic statement. If hemorrhage is involved, follow the alphabetization rules for the appropriate subterm and code.

In the alphabetization rules, subterms preceded by "with" and "without" immediately follow the main term or appropriate subterm entry; subterms beginning with other connecting words such as "in," "during," "due to," "following," "secondary," or "status" appear in alphabetic order. Words such as "with," "in," and "due to," are used to indicate the relationship between the main term and an associated condition or etiology. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as hemorrhage or when the Alphabetic Index so directs.

For small intestine, check the other combination codes that describe all of the elements in the diagnostic statement: 562.03.

For colon, check the other combination codes that describe all of the elements in the diagnostic statement: 562.13.

V0097 Exclusive check (if match, error) - R017

Diagnosis Table	562.01	Diverticulitis of small intestine [without mention of hemorrhage]
-----------------	--------	---

Relational Table	562.02	Diverticulosis of small intestine with hemorrhage
------------------	--------	---

HINT: Code 562.03 is a combination code that clearly identifies all the elements documented in the diagnostic statement.

V0097 Exclusive check (if match, error) - R019

Diagnosis Table	562.11	Diverticulitis of colon [without mention of hemorrhage]
-----------------	--------	---

Relational Table	562.12	Diverticulosis of colon with hemorrhage
------------------	--------	---

HINT: Code 562.13 is a combination code that clearly identifies all the elements documented in the diagnostic statement.

Illogical Diagnosis Code Relationships

V0098 TUBERCULOSIS PLEURISY with PLEURISY

Guideline: A single code used to classify two diagnoses or a diagnosis with an associated secondary process (manifestation) or complication is called a combination code. Combination codes can be located in the index lists referring to the subterm entries, with particular reference to such entries as "with," "due to," "in," and "associated with." Others are identified by reading inclusion and exclusion notes in the tabular lists. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement.

HINT: Read the "Excludes" notes under category 511 and code 012.0.

V0098	Exclusive check (if match, error) - R021

	012.03	Tuberculous pleurisy [tubercle bacilli found in sputum by microscopy]
	012.04	Tuberculous pleurisy [tubercle bacilli non found in sputum by microscopy, but found by bacterial culture]
	012.05	Tuberculous pleurisy [tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically]
	012.06	Tuberculous pleurisy [tubercle bacilli not found by bacteriological or histological examination but tuberculosis confirmed by other methods (inoculation of animals)]
Relational Table	511.0	Pleurisy without mention of effusion or current tuberculosis
	511.1	Pleurisy with effusion, with mention of a bacterial cause other than tuberculosis
	511.8	Pleurisy - other specified forms of effusion, except tuberculous
	511.9	Unspecified pleural effusion

HINT: Read the "Excludes" note under category 511 and code 012.0.

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0099 COPD with OTHER RESPIRATORY CONDITIONS

Guideline: The term Chronic Obstructive Pulmonary Disease (COPD) is a generic term that represents any form of unspecified chronic obstructive airway disease. COPD is not a separate disease entity when associated with other chronic obstructive lung disease. For example, code 491.21 (obstructive chronic bronchitis with acute exacerbation) should be used only for those combinations of diseases that are included in the tabular notes for the code and COPD.

A single code used to classify two diagnoses or a diagnosis with an associated secondary process (manifestation) or complication is called a combination code. Combination codes can be located in the index lists referring to the subterm entries, with particular reference to such entries as "with," "due to," "in," and "associated with." Others are identified by reading inclusion and exclusion notes in the tabular lists. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement.

HINT: Read the "Excludes" note under category 496.

Illogical Diagnosis Code Relationships

V0102 PERITONEAL ADHESIONS, WITH and WITHOUT OBSTRUCTION

Guideline: A single code used to classify two diagnoses or a diagnosis with an associated secondary process (manifestation) or complication is called a combination code.

Combination codes can be located in the index lists referring to the subterm entries, with particular reference to such entries as "with," "due to," "in," and "associated with." Others are identified by reading inclusion and exclusion notes in the tabular lists. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement.

HINT: Read the "Excludes" note under codes 568.0 and 560.81.

V0102 Exclusive check (if match, error) - R029

Diagnosis Table	568.0	Peritoneal adhesions
Relational Table	537.3	Other obstruction of duodenum
	560.81	Intestinal or peritoneal adhesions with obstruction

HINT: Read the "Excludes" note under codes 568.0 and 560.81.

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT

V0112 ILLOGICAL COMBINATIONS OF FIFTH DIGITS FOR OBSTETRICAL DIAGNOSES

Guideline: Multiple coding is commonly used with codes from this chapter because a patient often has more than one condition that affects the obstetrical experience. It is important that the coder recognize that certain combinations of fifth digits are illogical for the **same** episode of care:

.0 cannot be used with any other fifth digit.

.1 and 2 can be used for the same episode but not with any other fifth digit.

.3 and 4 cannot be used together or with any other fifth digit.

V0112 Exclusive Check (if match, error) - O001

Illogical Diagnosis Code Relationships

**V0113 SUPERVISION OF PREGNANCY (V22) with OTHER OBSTETRICAL CODES
FROM CHAPTER 11 IN THE ICD-9-CM CODE BOOK**

Guideline: Codes from V22 series are never used in combination with a code from Chapter 11 of the ICD-9-CM codebook. Category V22, Normal pregnancy, would never be used as a principal diagnosis for an inpatient admission, but it would be appropriate for coding the reason for encounter in a physician's office or in an outpatient clinic. It can also be used for coding an admitting diagnosis when it is required to be reported.

V0113 Exclusive check (if match, error) - W001

Diagnosis Table	V22.0	Supervision of normal first pregnancy
	V22.1	Supervision of other normal pregnancy
	V22.2	Pregnant state, incidental
Relational Table	630-677	Complications of Pregnancy, Childbirth, and the Puerperium

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0115 POSTPARTUM CARE AND EXAMINATION (V24) with OTHER OBSTETRICAL CODES FROM CHAPTER 11 IN THE ICD-9-CM CODEBOOK

Guideline: Codes from V24 series are never used in combination with a code from Chapter 11 of the ICD-9-CM codebook. Category V24 is used primarily for outpatient follow-up visits. When a patient is admitted for routine postpartum care immediately following a delivery outside the hospital, V24.0 is assigned as the principal diagnosis. If there were any postpartum complications, the appropriate code from chapter 11 of ICD-9-CM with fifth digit 2 or 4 would be assigned, not V24.0.

V0115 Exclusive check (if match, error) - W003

Diagnosis Table	V24.0	Postpartum care immediately after delivery
	V24.1	Lactating mother
	V24.2	Routine postpartum follow-up (<i>for outpatient encounters of postdelivery visits</i>)
Relational Table	630-677	Complications of Pregnancy, Childbirth, and the Puerperium

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0116 STERILIZATION (V25.2) INVALID AS PRINCIPAL DIAGNOSIS with
OBSTETRICAL DELIVERY DIAGNOSIS CODES**

Guideline: When a sterilization procedure is performed for contraceptive purposes during the same admission as that for delivery, code V25.2, Sterilization, is assigned as a secondary code, with a code from ICD-9-CM chapter 11 assigned as the principal diagnosis. When sterilization is the incidental result of obstetrical surgery, the V code is not assigned.

V0116 Exclusive check (if match, error) - W004

Illogical Diagnosis Code Relationships

VW117 ILLOGICAL OUTCOME OF DELIVERY (V27) FOR OBSTETRICAL DELIVERY DIAGNOSIS CODES

Guideline: A code from category V27 may be used as an additional code to provide such information as whether a live birth resulted or whether multiple births occurred. To locate the code assignment for outcome of delivery, the coder should refer to the main term "Outcome of delivery" in the ICD-9-CM alphabetic index of diseases. It may be necessary to refer to the newborn's medical record for this information. The coder should not assume that the outcome of delivery is single or live; for example: an outcome of single liveborn infant does not logically relate to the twin pregnancy or pregnancy with intrauterine death. The only outcome of delivery code that can be used with code 650 is V27.0, Single outcome. Any other outcome for code 650 represents a complication.

HINT: For twin pregnancies, codes V27.2-V27.4 would be more appropriate.

HINT: For multiple, triplet, or quadruplet pregnancies, codes V27.5-V27.7 would be more appropriate.

HINT: For intrauterine death pregnancies, codes V27.1, V27.4, and V27.7 would be more appropriate.

VW117 Exclusive check (if match, error) - W005

Diagnosis Table	650	Delivery in a completely normal case

	V27.9	Unspecified outcome of delivery

V0119 PREGNANCY CODES with NEWBORN CODES

Category V29, Observation and evaluation of newborns and infants for suspected conditions not found, is for use only for health newborns and infants for which no condition after study is found to be present.

Diagnosis Table	630-677	Complications of Pregnancy, Childbirth, and the Puerperium
Relational Table	V29.x	Observation and evaluation of newborns and infants for suspected conditions not found
	V30-V39	Liveborn infants according to type of birth

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0120 NORMAL PREGNANCY/ DELIVERY (650) with COMPLICATIONS OF
PREGNANCY, CHILDBIRTH, AND PUERPERIUM**

Guideline: Code 650 is assigned only when labor and delivery as well as the antepartum and postpartum periods are entirely normal. Code 650 applies to the entire obstetrical experience, not just the delivery itself. Code 650 cannot be used with any other code from ICD-9-CM chapter 11 because other codes in categories 640-676 indicate that the obstetrical experience was complicated in some way.

V0120 Exclusive check (if match, error) - O006

VW125 BIRTH INJURIES versus TRAUMATIC INJURIES

Guideline: Injuries due to birth injuries are classified to Chapter 15 of ICD-9-CM (perinatal conditions). If the injuries actually occurred in the birth process, ICD-9-CM refers coders to "Birth" section in the alphabetic index for proper coding of birth injuries. If congenital dislocation is documented, ICD-9-CM refers coders to "Dislocation, congenital" in the alphabetic index.

Exception: If a traumatic injury occurred after birth (i.e. fall) during hospitalization, please override this edit.

V0126 NEWBORN with PSYCHIATRIC MENTAL DISORDERS

Guideline: When a live birth occurs, an appropriate code from categories V30-V39 is assigned and sequenced first. Newborns with problems do not warrant a diagnosis of a mental disorder. Psychiatric conditions need to be worked up thoroughly after birth before a diagnosis of mental disorder is made. It is not logical to report some mental disorders for live births.

Examples of diagnoses should be classified to the Chapters 14 or 15 of the ICD-9-CM Codebook:

Respiratory depression of newborn should have a diagnosis code 770.8, instead of diagnosis code 311 (depression).

Drug withdrawal syndrome in newborn should have a diagnosis code 779.5, instead of diagnosis code 292.0 (drug withdrawal syndrome).

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW128 THIRD DEGREE BURN OVER 18% OF BODY WITH ILLOGICAL CODES FROM CATEGORY 948

Guideline: Category 948 is based on the classic "rules of nines" in estimating body surface involved: head and neck are assigned 9%, each arm 9%, each leg 18%, the anterior trunk 18%, the posterior trunk 18%, and genitalia 1%. Physicians may change these percentage assignments for burns where necessary to accommodate infants and children who have proportionately larger heads than adults and patients who have large buttocks, thighs, or abdomen.

In category 948, the 4th digit indicates the percentage of body surface involved in all types of burns, and the 5th digit indicates the percentage of total body surface involved in 3rd degree burn only. When using category 948 as an additional code, the 5th digit should correspond to the percentage of body surface involved in 3rd degree. For some sites indicating more than 10% with 3rd degree (see the codes listed below in the diagnosis table), it is illogical to have code 948.x with 5th digit "0" (third degree less than 10%).

Exception: If the affected burn site is coded to the highest degree and the extent of the 3rd degree burn is actually less than 10% in the same site, override the edit.

VW128 Exclusive check (if match, error) - X025

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0130 MENTAL OBSERVATION with MENTAL DIAGNOSIS

Guideline: DSM-III-R and DSM-IV instruct coders to use V71.09 or 799.9 to indicate that no diagnosis on Axis I or Axis II is available at discharge. Because the DSM-III-R coding guidelines are different from the ICD-9-CM coding guidelines, modifications are required to establish uniformity.

The Psychiatric Health Record Practitioners (PHRP) of the California Health Information Association recognizes the potential problems and states in *PHRP Coding Guidelines*, "Diagnoses must be properly sequenced for submission to Medicare, insurance companies, OSHPD and other agencies. If absolutely necessary, these codes [V71.09 and 799.90] can be used for in-house hospital tracking purposes but do not report to data processor, OSHPD, surveys, etc. This may require re-sequencing diagnoses, if there are diagnoses on Axes I and II." Codes V71.09 and 799.9 fill OSHPD'S database with useless information and should not be reported. **OSHPD would like to reinforce this guideline by requesting that psychiatric facilities should not use these codes (V71.09 and 799.9) when reporting to OSHPD.**

V0138 INGUINAL HERNIA, WITH and WITHOUT GANGRENE

Guideline: Hernias are classified by type and site, with combination codes used to indicate the presence of gangrene or obstruction. Fifth digits are used with codes for inguinal hernia to indicate whether the hernia is unilateral or bilateral and whether it is recurrent.

The fifth digit "2" or "3" is used to identify bilateral inguinal hernias with one or both hernias diagnosed with gangrene. Two unilateral inguinal hernias with one hernia being gangrene should be combined into one combination code using the gangrenous inguinal hernia code (550.0x) and the fifth digit "2" or "3".

V0138 Exclusive Check (if match, error) - R063

Diagnosis Table	550.00	Inguinal hernia, with gangrene, unilateral or unspecified, not specified as recurrent)
	550.01	Inguinal hernia, with gangrene, unilateral or unspecified, recurrent
	550.02	Inguinal hernia, with gangrene, bilateral, (not specified as recurrent)
	550.03	Inguinal hernia, with gangrene, bilateral, recurrent

VW158 MISSED ABORTION or DELIVERY - WHICH IS IT?

Guideline: When a complication of pregnancy has resulted in abortion, a code from categories 640-648 and 651-657 may be used as an additional code. Fifth-digit 0 is assigned with codes from these categories when used with an abortion code because the other fifth digits do not apply.

The term "missed abortion" refers to early fetal death prior to the completion of 22 weeks of gestation, with the fetus retained for a period of time. It is illogical to have a missed abortion and a current pregnancy with delivery (5th digits 1 or 2) appear together on the same record.

If the patient with a diagnosis of multiple gestation suffers early fetal loss (abortion) with one or more remaining fetuses, category 651 (multiple gestation) indicates that this occurred.

VW158	Exclusive Check (if match, error) - O012	
Diagnosis Table	632	Missed abortion
Relational Table	<u>640-649</u> with 5 th digits 1 or 2	Complications mainly related to pregnancy
	<u>652-659</u> with 5 th digits 1 or 2	Other indications for care in pregnancy, labor, and delivery (Category 651 was excluded)
	<u>660-669</u> with 5 th digits 1 or 2	Complications occurring mainly in the course of labor and delivery (<i>except 662.3x</i>)
	<u>670-676</u> with 5 th digits 1 or 2	Complications of the puerperium

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0159 ELDERLY PRIMIGRAVIDA OR ELDERLY MULTIGRAVIDA – WHICH IS IT?

Guideline: One type of the "Excludes" notes indicates that two conditions that appear similar actually have different codes for advanced maternal age based on etiology (number of pregnancies). The "Excludes" note under code 659.6 (elderly multigravida excludes elderly primigravida (code 659.5). The correct interpretation in such cases is that one or the other should be used, but not both.

V0159 Exclusive Check (if match, error) - O014

Diagnosis Table	659.50	Elderly primigravida, unspecified episode of care
	659.51	Elderly primigravida, delivered with or without mention of antepartum condition
	659.53	Elderly primigravida, antepartum or complication
Relational Table	659.60	Elderly multigravida, unspecified episode of care
	659.61	Elderly multigravida, delivered with or without mention of antepartum condition

Illogical Diagnosis Code Relationships

V0160 PERINATAL CONDITIONS ON MOTHER'S RECORD

Guideline: Although many of the category titles in chapter 15 of ICD-9-CM codebook contain words that appear to refer to a maternal condition, all codes in chapter 15 pertain to the infant and are never assigned to the mother's medical record.

V0160 Exclusive Check (if match, error) - O016

Diagnosis Table	640-677	Complications of pregnancy, childbirth, and the puerperium
Relational Table	760-779	Certain conditions originating in the perinatal period <i>excludes: 760.76 Diethylstilbestrol (DES) influencing fetus</i> <i>760.79 Other noxious influences affecting fetus via placenta or breast milk</i>

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0161 CONCUSSION versus SPECIFIED HEAD INJURY

Guideline: The diagnosis of concussion, category 850, refers to cerebral bruising leading to transient unconsciousness or no loss of consciousness. Patients with head injuries are often dazed for a short period after the head injury impact and it may be difficult to determine if traumatic unconsciousness occurred for one or more minutes. It should be noted that ICD-9-CM provides for the diagnosis of concussion to be classified without known loss of consciousness (code 850.0) based on clinical features of mental confusion or disorientation.

Codes from categories 850 are not assigned when the closed or open head injury is further described as a cerebral contusion or laceration, intracranial hemorrhage, skull fracture, or other specified condition classifiable to codes in the 800-801, 803-804, or 851-854 series. In these series, the use of fifth digits incorporates the presence of a concussion.

V0161	Exclusive check (if match, error) - R009	

Diagnosis Table	850.xx	Concussion
Relational Table	800.xx	Fracture of vault of skull
	801.xx	Fracture of base of skull
	803.xx	Other and unqualified skull fractures

	801.xx	Fracture of base of skull
	803.xx	Other and unqualified skull fractures
	804.xx	Multiple fractures involving skull or face with other bones
	851.xx	Cerebral laceration and contusion
	852.xx	Subarachnoid, Subdural, and Extradural hemorrhage, following injury
	853.xx	Other and unspecified intracranial hemorrhage following injury

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0164 CVA versus SPECIFIED CEREBRAL OCCLUSION

Guideline: When the diagnosis is given as "cerebrovascular accident," "CVA," or "stroke" without any further qualification, it is important for the coder to review the medical record to discover the cause of the stroke or "cerebrovascular stroke" or to consult with the physician and classify it accordingly.

Codes from categories 430-435 should be assigned when the specific type of stroke has been documented. Therefore, code 436, ill-defined cerebrovascular disease, should only be used when no further information is available. Read the "Excludes" note under code 436. The use of code 436 with a code from categories 430-435 or 438 is redundant and incorrect because the more specific code always takes precedence.

V0164 Exclusive Check (if match, error) - Y003

Diagnosis Table	436	Acute, but ill-defined cerebrovascular disease
Relational Table	430	Subarachnoid hemorrhage
	431	Intracerebral hemorrhage
	432	Other and unspecified intracranial hemorrhage
	433	Occlusion and stenosis of precerebral arteries
	434	Occlusion of cerebral arteries
	435	Transient cerebral ischemia

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0168 TYPE I and TYPE II DIABETES

Guideline: Diabetes mellitus has two special features and special implications for patient care. The important factor in determining which fifth digit to use is whether the patient is a type I or type II.

Patients with type I (juvenile type or insulin-dependent) diabetes require insulin to maintain normal blood glucose levels. There are occasions during symptom-free intervals where insulin therapy is not required but this does not indicate that the type of diabetes has changed - it is still Type I (insulin-dependent diabetes).

Patients with type II (adult-onset type or non-insulin dependent) diabetes generally do not require insulin. There are occasions to control symptoms where insulin therapy is required but this does not indicate that the type of diabetes has changed - it is still Type II (non-insulin dependent diabetes).

It is incorrect to change the physician's designation of non-insulin dependent (Type II diabetes mellitus) to insulin dependent (Type I diabetes mellitus), without the attending physician's concurrence. The administration of insulin has no affect on code assignment. The age of the patient at the time of disease onset has no affect on code assignment. Only the type of diabetes (I or II) affects code assignment. The distinguishing factor between Type I and Type II is the presence or absence of natural insulin. Type I patients require insulin to sustain life because the body does not produce insulin. Type II patients, whose bodies are able to produce sufficient amounts of insulin, may receive insulin therapy (to correct symptomatic or persistent hyperglycemia), to assist the body in utilizing the insulin that is present in the body. Type II patients are not dependent on insulin to sustain life.

Coding diabetes as both Type I and Type II is contradictory and distorts statistics.

V0168 Exclusive check (if match, error) - X003

Diagnosis Table	250.x0	Type II Diabetes mellitus [Non-insulin dependent]
	250.x2	Type II Diabetes mellitus [Non-insulin dependent]
Relational Table	250.x1	Type I Diabetes mellitus [Insulin dependent]
	250.x3	Type I Diabetes mellitus [Insulin dependent]

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0169 CONTROLLED versus UNCONTROLLED DIABETES

Guideline: Uncontrolled diabetes is a nonspecific term indicating that the patient's blood sugar level is not kept within acceptable levels by his or her current treatment regimen. The fifth digits indicating uncontrolled diabetes should only be used when the physician diagnoses uncontrolled diabetes.

Coding diabetes as both controlled and uncontrolled is contradictory and distorts statistics.

V0169 Exclusive check (if match, error) - X004

Diagnosis Table	250.x0	Type II Diabetes mellitus, <u>not</u> stated as uncontrolled
	250.x1	Type I Diabetes mellitus, <u>not</u> stated as uncontrolled

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0170 HYPOGLYCEMIA and HYPOGLYCEMIC DIABETES

Guideline: Category 251, Other disorders of pancreatic internal secretion, should **not** be used for patients with diabetes mellitus. Therefore, hypoglycemia in a patient with diabetes mellitus should be coded to category 250, not 251.

Read the "Excludes" notes under codes 251.0, 251.1, and 251.2.

A single code used to classify two diagnoses or a diagnosis with an associated secondary process (manifestation) or complication is called a combination code.

Combination codes can be located in the index lists referring to the subterm entries, with particular reference to such entries as "with," "due to," "in," and "associated with." Others are identified by reading inclusion and exclusion notes in the tabular lists. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs. Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement.

V0170	Exclusive check (if match, error) - X005	

Diagnosis Table	251.1	Other specified hypoglycemia
	251.2	Hypoglycemia, unspecified

	251.0	Hypoglycemic coma

V0170	Exclusive check (if match, error) - X015	

Diagnosis Table	251.0	Hypoglycemic coma
Relational Table	250.3x	Diabetes with other coma

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0171 BACTEREMIA versus SEPTICEMIA

Guideline: Categories 790-796 are specified by ICD-9-CM for the reporting of nonspecific abnormal findings of diagnostic tests when no related diagnosis is established. Codes from the 790-796 series are never assigned on the basis of an abnormal laboratory finding alone, nor are they assigned when the associated diagnosis has been recorded.

Bacteremia is defined as the presence of bacteria in the blood. Septicemia is defined as systemic disease associated with the presence and persistence of pathogenic microorganisms or their toxins in the blood. The two terms are not synonymous. Bacteremia denotes a laboratory finding; septicemia denotes acute illness.

Read the Excludes note under code 790.7 and category 038.

V0171	Exclusive Check (if match, error) - X012	
Diagnosis Table	790.7	Bacteremia
Relational Table	038	Septicemia

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0172 POSITIVE TB TEST versus TUBERCULOSIS

Guideline: Categories 790-796 are specified by ICD-9-CM for the reporting of nonspecific abnormal findings of diagnostic tests when no related diagnosis is established. Codes from the 790-796 series are never assigned on the basis of an abnormal laboratory finding alone, nor are they assigned when the associated diagnosis has been recorded.

Care should be taken to differentiate between a diagnosis of tuberculosis (010) and a positive tuberculin skin test (795.5) without a diagnosis of active tuberculosis.

V0172 Exclusive Check (if match, error) - X013

Diagnosis Table	795.5	Nonspecific reaction to tuberculin skin test without active tuberculosis
Relational Table	010.xx	Primary tuberculous infection
	017.0x	Tuberculosis of skin and subcutaneous cellular tissue

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0173 CHRONIC HEPATITIS versus VIRAL HEPATITIS

Guideline: Non-viral and unspecified hepatitis is classified in category 571, Chronic liver disease and cirrhosis, in the Digestive system chapter. All viral hepatitis is classified in category 070, Viral hepatitis, in the Infectious and Parasitic Disease chapter.

The viral hepatitis codes do not distinguish between the acute and chronic forms of the disease. Acute and chronic stages of viral hepatitis are classified to category 070. In the alphabetic index, there are two supplementary words (acute) and (chronic) next to the term "Hepatitis" which may be present or absent in the statement of a disease without affecting the code number.

V0173 Exclusive Check (if match, error) - X014

Diagnosis Table	571.40	Chronic hepatitis, unspecified
	571.41	Chronic persistent hepatitis
	571.49	Other chronic hepatitis
Relational Table	070.xx	Viral hepatitis

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW174 ATHEROSCLEROSIS OF EXTREMITY HIERARCHY

Guideline: Additional fifth digits have been created to identify additional manifestations of the disease for subcategory 440.2, Atherosclerosis of arteries of the extremities. These codes are listed in order of increasing priority. The structure of the combination codes is hierarchal. If the patient presents with ulceration and gangrene, only one combination code (440.24) is sufficient to identify both conditions.

Exception: This edit can be overridden if the codes are not related to the same extremity.

VW174	Exclusive Check (if match, error) - R011	

Diagnosis Table	440.20	Atherosclerosis of the extremities, unspecified
Relational Table	440.21	Atherosclerosis of the extremities with intermittent claudication
	440.22	Atherosclerosis of the extremities with rest pain
	440.23	Atherosclerosis of the extremities with ulceration
	440.24	Atherosclerosis of the extremities with gangrene

VW174	Exclusive Check (if match, error) - R012	

Diagnosis Table	440.21	Atherosclerosis of the extremities with intermittent claudication
Relational Table	440.22	Atherosclerosis of the extremities with rest pain
	440.23	Atherosclerosis of the extremities with ulceration
	440.24	Atherosclerosis of the extremities with gangrene

VW174	Exclusive Check (if match, error) - R013	

Diagnosis Table	440.22	Atherosclerosis of the extremities with rest pain
Relational Table	440.23	Atherosclerosis of the extremities with ulceration
	440.24	Atherosclerosis of the extremities with gangrene

VW174	Exclusive Check (if match, error) - R014	

Diagnosis Table	440.23	Atherosclerosis of the extremities with ulceration
Relational Table	440.24	Atherosclerosis of the extremities with gangrene

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW176 GANGRENE and ATHEROSCLEROSIS - EXTREMITY

Guideline: Additional fifth digits have been created to identify additional manifestations of the disease for subcategory 440.2, Atherosclerosis of arteries of the extremities. These codes are listed in order of increasing priority. The structure of the combination codes is hierarchal. Only one combination code is sufficient to identify both conditions. Therefore, the assignment of 785.4, Gangrene, with code 440.24 is incorrect.

Exception: This edit can be overridden if the codes are not related to the same extremity.

VW176 Exclusive Check (if match, error) - R016

Diagnosis Table 785.4 Gangrene

Relational Table 440.24 Atherosclerosis of the extremities with gangrene

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0177 UNSPECIFIED versus SPECIFIED DIABETES COMPLICATION

Guideline: A code for an unspecified condition is never assigned when a more specific code from the same category.

Code 250.9x, diabetes with unspecified complication, is never to be assigned with any other code from 250.1x-250.8x. It is illogical for diabetes to have both an unspecified complication and a specified complication appearing together on the same record.

V0177 Exclusive Check (if match, error) - X017

Diagnosis Table	250.9x	Diabetes with unspecified complication
Relational Table	250.1x	Diabetes with ketoacidosis
	250.2x	Diabetes with hyperosmolarity
	250.3x	Diabetes with other coma
	250.4x	Diabetes with renal manifestations
	250.5x	Diabetes with ophthalmic manifestations
	250.6x	Diabetes with neurological manifestations
	250.7x	Diabetes with peripheral circulatory disorders
	250.8x	Diabetes with other specified manifestations

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0178 EPILEPSY, WITH and WITHOUT INTRACTABILITY

Guideline: It is illogical for epilepsy with and without intractability to appear on the same record.

V0178 Exclusive Check (if match, error) - X019

Diagnosis Table	345.00	Generalized nonconvulsive epilepsy with <u>no intractable epilepsy</u>
	345.10	Generalized convulsive epilepsy with <u>no intractable epilepsy</u>
	345.40	Partial epilepsy, with impairment of consciousness with <u>no intractable epilepsy</u>
	345.50	Partial epilepsy, without impairment of consciousness, with <u>no intractable epilepsy</u>
	345.60	Infantile spasms, with <u>no intractable epilepsy</u>
	345.70	Epilepsia partialis continua with <u>no intractable epilepsy</u>
	345.80	Other forms of epilepsy with <u>no intractable epilepsy</u>
	345.90	Epilepsy, unspecified, with <u>no intractable epilepsy</u>
Relational Table	345.01	Generalized nonconvulsive epilepsy <u>with intractable epilepsy</u>
	345.11	Generalized convulsive epilepsy <u>with intractable epilepsy</u>

	345.51	Partial epilepsy, without impairment of consciousness, <u>with intractable epilepsy</u>
	345.61	Infantile spasms, <u>with intractable epilepsy</u>
	345.71	Epilepsia partialis continua with intractable epilepsy
	345.81	Other forms of epilepsy <u>with intractable epilepsy</u>
	345.91	Epilepsy, unspecified, <u>with intractable epilepsy</u>

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0179 UNSPECIFIED versus SPECIFIED EPILEPSY

Guideline: A code for an unspecified condition is never assigned with a code for a specified condition from the same category. It is illogical for epilepsy to be both specified and unspecified on the same record.

V0179 Exclusive Check (if match, error) - X021

Diagnosis Table	345.9x	Epilepsy, unspecified
Relational Table	345.0x	Generalized nonconvulsive epilepsy
	345.1x	Generalized convulsive epilepsy
	345.2	Petite mal status
	345.3	Grand mal status
	345.4x	Partial epilepsy, with impairment of consciousness
	345.5x	Partial epilepsy, without impairment of consciousness
	345.6x	Infantile spasms
	345.7x	Epilepsia partialis continua
	345.8x	Other forms of epilepsy

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW180 PATHOLOGICAL versus TRAUMATIC FRACTURE

Guideline: Codes from 800-829 for traumatic fractures should never be used with a code from category 733.1, pathological fracture of the same bone. Check the record for any history of recent significant trauma or for any indication of the presence of concurrent bone disease that might point to pathological fracture.

If the physician determines that the fracture is due to trauma, then only a code from 800-829, Fractures (traumatic), would be assigned.

If the physician determines that the fracture is pathological, then a code from 733.lx, Pathological fracture, would be assigned.

Exception: This edit can be overridden if the pathological and traumatic codes are not related to the same site.

E codes may be used to identify the nature of trauma if the pathological fracture follows minor trauma.

VW180 Exclusive Check (if match, error) - X022

Diagnosis Table	733.11	Pathological fracture, humerus
Relational Table	812.xx	Fracture of humerus

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0182 UNSPECIFIED versus SPECIFIED JAUNDICE

Guideline: The "Inclusion" notes under codes 773.0-773.2 include jaundice due to hemolytic disease that can affect the fetus OR the newborn. Codes 774.2 and 774.6 would not be needed to identify jaundice. Therefore, it is incorrect to use a non-specified code with a specified code for the same condition.

V0182 Exclusive Check (if match, error) - Y004

Diagnosis Table	773.0	Hemolytic disease due to Rh isoimmunization
	733.1	Hemolytic disease due to ABO isoimmunization
	773.2	Hemolytic disease due to other and unspecified isoimmunization
Relational Table	774.2	Neonatal jaundice associated with preterm delivery
	774.6	Unspecified fetal and neonatal jaundice

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0183 OPEN AND CLOSED FRACTURE OF SAME SITE

Guideline: It is illogical to have a closed and open fracture of the same bone. An open fracture indicates that the skin has been punctured by the bone; a closed fracture has not penetrated the skin. The list of terms used for open and closed fractures is found in the note at the beginning of the fracture section in the tabular list.

If a diagnostic statement contains terms that relate to both open and closed fractures, the fracture should be classified as open. The code for the open fracture always takes precedence.

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0185 ATTENTION versus STATUS ... RELATED TO STOMA

Guideline: When there is an attention to the stoma, code V55 indicates the need for care such as closure, passage of sounds or bougies, reforming, removal or replacement of catheter, and toilet or cleansing. Code V44 indicates status only, without need for care. It is illogical for a stoma of the same site to have both absence and presence of stomal care during the current episode of care.

V0185	Exclusive check (if match, error) - W012

VW186 ATHEROSCLEROSIS with GAS GANGRENE ?

Guideline: Code 440.24, Atherosclerosis of the extremities with gangrene, can only be used with ischemic gangrene. Read the inclusion note under code 440.24. Therefore, code 004.0, gas gangrene, cannot be used correctly with code 440.24 but it can be used correctly with code 440.29, Other atherosclerosis of native arteries of extremities.

Exception: This edit can be overridden if the codes are not related to the same extremity.

VW186 Exclusive check (if match, error) - X082

Diagnosis Table	040.0	Gas gangrene
-----------------	-------	--------------

Relational Table	440.24	Atherosclerosis of the native arteries of the extremities with gangrene
------------------	--------	---

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW187 ANGINA versus CORONARY OCCLUSION

Guideline: Code 411.1, Intermediate coronary syndrome, includes conditions described as unstable angina, crescendo angina, preinfarction angina, and impending myocardial infarction. Code 411.1 is assigned when the patient is admitted and treated for unstable angina WITHOUT documentation of infarction, occlusion, or thrombosis. Therefore, code 411.1 is not assigned with code 411.81 that describes a coronary occlusion without myocardial infarction.

VW187 Exclusive check (if match, error) - Y005

Diagnosis Table	411.1	Intermediate coronary syndrome
Relational Table	411.81	Coronary occlusion without myocardial infarction

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

VW188 ANGINA and/or CORONARY OCCLUSION versus MYOCARDIAL INFARCTION

Guideline: Code 411, Other acute and subacute forms of ischemic heart disease, is assigned when the patient's condition does not progress to acute myocardial infarction. Therefore, a code from 411 (*except 411.0, postmyocardial infarction*) is not assigned with a code 410.xx, Acute myocardial infarction, when the infarction has occurred.

VW188 Exclusive check (if match, error) - Y006

Diagnosis Table 0	411.1	Intermediate coronary syndrome
	411.81	Coronary occlusion without myocardial infarction
	411.89	Other acute and subacute forms of ischemic heart disease
Relational Table	410.x0	Acute myocardial infarction, unspecified episode of care
	410.x1	Acute myocardial infarction, initial episode of care

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0189 RHEUMATIC HEART DISEASE and HEART FAILURE

Guideline: Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as congestive heart failure and rheumatic heart disease or when the Alphabetic Index so directs.

Code 398.91, Rheumatic heart failure (congestive) is a combination code that clearly identifies all the elements documented in the diagnostic statement.

V0189 Exclusive check (if match, error) - R018

Diagnosis Table	398.90	Rheumatic heart disease, unspecified
	398.99	Other rheumatic heart disease
Relational Table	428.0	Congestive heart failure, unspecified

	428.9	Heart failure, unspecified

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0190 RHEUMATIC HEART FAILURE with CONGESTIVE HEART FAILURE

Guideline: During the current episode of care, it is illogical for the heart failure to be both rheumatic and nonrheumatic. Read the "Excludes" notes under category 428.

V0190 Exclusive check (if match, error) - R020

Diagnosis Table	398.91	Rheumatic heart failure (congestive)
Relational Table	428.0	Congestive heart failure

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0191 PRECEREBRAL ARTERY, WITH AND WITHOUT INFARCTION

Guideline: The rule for governing the ICD-9-CM requires that fifth digits modify the fourth digit to which they are applied. They must follow a logical hierarchical structure. The fifth digit "0" means without mention of cerebral infarction and fifth digit "1" means with cerebral infarction. These fifth digits indicate the presence or absence of an infarct during the current episode of care. During the current episode of care, it is illogical for the precerebral artery to have both fifth digits (with and without infarction).

V0191 Exclusive check (if match, error) - X086

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0193 BASILAR SYNDROME versus OCCLUSION

Guideline: During the current episode of care, it is illogical for the basilar artery to have both syndrome and occlusion. If the basilar artery syndrome is due to stenosis or occlusion of basilar artery, it should be classified to code 433.0x. Read the "Excludes" notes under category 435.

V0193 Exclusive check (if match, error) - X079

Diagnosis Table	435.0	Basilar artery syndrome
Relational Table	433.00	Basilar artery occlusion and/or stenosis without mention of cerebral infarction
	433.01	Basilar artery occlusion and/or stenosis with cerebral infarction

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0194 VERTEBRAL SYNDROME versus OCCLUSION

Guideline: During the current episode of care, it is illogical for the vertebral artery to have both syndrome and occlusion. If the vertebral artery syndrome is due to stenosis or occlusion of vertebral artery, it should be classified to code 433.0x. Read the "Excludes" notes under category 435.

V0194 Exclusive check (if match, error) - X080

Diagnosis Table	435.1	Vertebral artery syndrome
Relational Table	433.20	Vertebral artery occlusion and/or stenosis without mention of cerebral infarction
	433.21	Vertebral artery occlusion and/or stenosis with cerebral infarction

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0195 VERTEBROBASILAR ARTERY SYNDROME: COMBINATION CODE = 435.3

Guideline: Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as basilar artery syndrome and vertebral artery syndrome or when the Alphabetic Index so directs.

Code 435.3, Vertebrobasilar artery syndrome, is a combination code that clearly identifies all the elements documented in the diagnostic statement. This is effective for discharges 10-1-95.

V0195 Exclusive check (if match, error) - X081

Diagnosis Table	435.0	Basilar artery syndrome
Relational Table	435.1	Vertebral artery syndrome

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0196 PROLONGED PT/PTT versus COAGULATION DISORDER

Guideline: Code 790.92, Abnormal coagulation profile, identifies abnormal laboratory findings of prolonged bleeding time WITHOUT the presence of hemorrhage or a coagulation disorder. Therefore, it is illogical for code 790.92, abnormal coagulation profile, to be assigned with the presence of hemorrhage or a coagulation disorders from category 286, Coagulation defects.

V0196 Exclusive check (if match, error) - Y007

Diagnosis Table	790.92	Abnormal coagulation profile
Relational Table	286.x	Coagulation defects

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0233 574.6x COMBINATION CODE NEEDED FOR GALLSTONE AND BILE STONE
WITH ACUTE CHOLECYSTITIS**

Guideline: Code 574.6x, Calculus of gallbladder and bile duct with acute cholecystitis, is a combination code that clearly identifies all the elements documented in the diagnostic statement. This is effective for discharges on or after 10-1-96.

Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as gallstones and bile duct stones or when the Alphabetic Index so directs.

V0233 Exclusive check (if match, error) - R033

Diagnosis Table	574.00	Calculus of gallbladder with acute cholecystitis without obstruction
	574.01	Calculus of gallbladder with acute cholecystitis with obstruction
Relational Table	574.30	Calculus of bile duct with acute cholecystitis without obstruction
	574.31	Calculus of bile duct with acute cholecystitis with obstruction

HINT: The combination code is 574.6x (Calculus of gallbladder and bile duct with acute cholecystitis with/without obstruction).

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0234 574.7x COMBINATION CODE NEEDED FOR GALLSTONE AND BILE STONE
WITH OTHER CHOLECYSTITIS**

Guideline: Code 574.7x, Calculus of gallbladder and bile duct with other cholecystitis, is a combination code that clearly identifies all the elements documented in the diagnostic statement. This is effective for discharges on or after 10-1-96.

Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as gallstones and bile duct stones or when the Alphabetic Index so directs.

V0234 Exclusive check (if match, error) - R035

Diagnosis Table	574.10	Calculus of gallbladder with other cholecystitis without obstruction
	574.11	Calculus of gallbladder with other cholecystitis with obstruction
Relational Table	574.40	Calculus of bile duct with other cholecystitis without obstruction
	574.41	Calculus of bile duct with other cholecystitis with obstruction

HINT: The combination code is 574.7x (Calculus of gallbladder and bile duct with other cholecystitis with/without obstruction).

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0235 574.9x COMBINATION CODE NEEDED FOR GALLSTONE AND BILE STONE
WITHOUT MENTION OF CHOLECYSTITIS**

Guideline: Code 574.9x, Calculus of gallbladder and bile duct without cholecystitis, is a combination code that clearly identifies all the elements documented in the diagnostic statement. This is effective for discharges on or after 10-1-96.

Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as gallstones and bile duct stones or when the Alphabetic Index so directs.

V0235 Exclusive check (if match, error) - R037

Diagnosis Table	574.20	Calculus of gallbladder without mention of cholecystitis without obstruction
	574.21	Calculus of gallbladder without mention of cholecystitis with obstruction
Relational Table	574.50	Calculus of bile duct without mention of cholecystitis without obstruction
	574.51	Calculus of bile duct without mention of cholecystitis with obstruction

HINT: The combination code is 574.9x (Calculus of gallbladder and bile duct without cholecystitis with/without obstruction).

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

**V0236 574.8x COMBINATION CODE NEEDED FOR GALLSTONE AND BILE STONE
WITH ACUTE AND CHRONIC CHOLECYSTITIS**

Guideline: Code 574.8x, Calculus of gallbladder and bile duct with acute and chronic cholecystitis, is a combination code that clearly identifies all the elements documented in the diagnostic statement. This is effective for discharges on or after 10-1-96.

Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved such as gallstones and bile duct stones or when the Alphabetic Index so directs.

V0236 Exclusive check (if match, error) - R040

	574.61	Calculus of gallbladder and bile duct with acute cholecystitis with obstruction
Relational Table	574.70	Calculus of gallbladder and bile duct with other cholecystitis without obstruction
	574.71	Calculus of gallbladder and bile duct with other cholecystitis with obstruction

HINT: The combination code is 574.8x (Calculus of gallbladder and bile duct with acute and chronic cholecystitis with/without obstruction).

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0237 NEWBORN OUTCOME (V27) NEEDED FOR OBSTETRICAL DELIVERY RECORD

Guideline: An outcome of delivery code, V27, should be assigned as an additional code during the episode of care during which delivery occurred. The fourth digits indicate whether the outcome is liveborn or stillborn, and whether the outcome is single infant or multiple infants.

These codes should not be used when a delivery occurs prior to hospital admission, or on subsequent admissions, or on the newborn record.

V0237 Inclusive check (if no match, error) - M001

Diagnosis Table	640-676 <i>5th digits .1 or .2</i> 650	Pregnancy, delivered, with or without mention of antepartum or postpartum condition Labor, delivery, antepartum and postpartum periods are entirely normal
Relational Table	V27.x	Outcome of Delivery

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0238 PREGNANCY, WITH and WITHOUT HYPERTENSION

Guideline: Hypertension associated with pregnancy, childbirth, or the puerperium is considered to be a complication unless the physician specifically indicates that it is not. This includes both pre-existing and transient hypertension of pregnancy or that arising during pregnancy. Often the symptoms of hypertension include edema and/or albuminuria or excessive weight gain that can aggravate hypertension.

If the edema or excessive weight gain in pregnancy is documented by the physician and the hypertension is mentioned, the "Excludes" note directs the coder to use the combination code 642.x instead. It is illogical for a patient to have both hypertension and no hypertension.

V0238 Exclusive check (if match, error) - O007

Diagnosis Table	642.xx	Hypertension complicating pregnancy, childbirth, or the puerperium
Relational Table	646.1x	Edema or excessive weight gain in pregnancy, without mention of hypertension

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0239 PREGNANCY AND KIDNEY DIAGNOSIS, WITH and WITHOUT HYPERTENSION

Guideline: Hypertension associated with pregnancy, childbirth, or the puerperium is considered to be a complication unless the physician specifically indicates that it is not. This includes both pre-existing and transient hypertension of pregnancy or that arising during pregnancy. Often the symptoms of hypertension include edema, albuminuria, renal disease, nephropathy, and/or uremia.

If the albuminuria or renal disease in pregnancy is documented by the physician and the hypertension is mentioned, the "Excludes" note directs the coder to use the combination code 642.x instead. It is illogical for a patient to have both hypertension and no hypertension.

V0239 Exclusive check (if match, error) - O009

Diagnosis Table	642.xx	Hypertension complicating pregnancy, childbirth, or the puerperium

VW242 **UNSPECIFIED versus SPECIFIED TUMORS**

new 1/1/97

Guideline: A code for an unspecified condition is never assigned when a more60 specific code from the same category is also assigned.

It is illogical for tumors of the same site to be both unspecified and specified from the same category on the same record.

Illogical Diagnosis Code Relationships

V0250 WITH OR WITHOUT HEPATITIS DELTA?

new 1/1/97

Guideline: A single code used to classify two diagnoses or a diagnosis with an associated secondary process (manifestation) or complication is called a combination code. A combination code clearly identifies all the elements documented in the diagnostic statement.

Combination codes can be located in the index lists referring to the subterm entries, with particular reference to such entries as "with," "due to," "in," and "associated with." Others are identified by reading inclusion and exclusion notes in the tabular lists. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs.

Coding this condition with and without Hepatitis Delta is contradictory and distorts statistics.

V0250	Exclusive check (if match, error) - R052

V0259 SEVERE PSYCHOSES, WITH and WITHOUT PSYCHOTIC BEHAVIOR

new 1/1/97

Guideline: A single code used to classify two diagnoses or a diagnosis with an associated secondary process (manifestation) or complication is called a combination code. A combination code clearly identifies all the elements documented in the diagnostic statement.

Combination codes can be located in the index lists referring to the subterm entries, with particular reference to such entries as "with," "due to," "in," and "associated with." Others are identified by reading inclusion and exclusion notes in the tabular lists. Only the combination code is assigned when the code fully identifies the diagnostic conditions involved or when the Alphabetic Index so directs.

Coding this condition with and without psychotic behavior is contradictory and distorts statistics.

V0259	Exclusive check (if match, error) - R115

**V0298 518.84 COMBINATION CODE NEEDED FOR
ACUTE AND CHRONIC RESPIRATORY FAILURE**
new 10-1-98

Guideline: Code 518.84, Acute and chronic respiratory failure, is a combination code that clearly identifies all the elements documented in the diagnostic statement. This is effective for discharges on or after October 1, 1998.

Multiple codes should not be assigned when the classification provides a combination code that clearly identifies all the elements documented in the diagnostic statement. Therefore, the combination code 518.84 is more appropriate because it fully identifies both acute respiratory failure and chronic respiratory failure.

V0298 Exclusive check (if match, error) – R178

Diagnosis Table	518.83	Chronic respiratory failure
Relational Table	518.81	Acute respiratory failure

HINT: The combination code is 518.84 (Acute and chronic respiratory failure).

OFFICE OF STATEWIDE HEALTH PLANNING AND DEVELOPMENT
Illogical Diagnosis Code Relationships

V0299 **URINARY TRACT INFECTION, SITE SPECIFIED VERSUS UNSPECIFIED**
new 6/1/99

Guidelines Urinary Tract Infections (UTI) are assigned codes based on the “site” of the infection. UTI refers to lower urinary tract infection, such as urethritis and cystitis, or upper urinary tract infection, such as pyelonephritis.

Code 599.0, Urinary Tract Infection Site Not Specified, should not be used in combination with codes that specifically identify the site(s) of the UTI. For example, if the term “acute cystitis” and “urinary tract infection” are both documented separately on the final diagnosis sheet, only the code for the acute cystitis should be assigned. If the infection has spread to other sites, these may be coded, as well. It should be noted that urinary tract infections that are due to sexually transmitted disease, such as candidiasis or chlamydia would be coded elsewhere.

V0299 Exclusive check (if match, error) – Y434

Diagnosis Table	590	Infection of kidney
	595	Cystitis

**VW300 MANDATORY MULTIPLE CODING:
NEED UNDERLYING DISEASE FOR MANIFESTATION DIAGNOSIS CODE**

Guideline: This dual classification is used to describe the assignment of two codes for certain diagnostic statements that contain information about both a manifestation and the underlying disease (etiology) with which it is associated. Mandatory multiple coding of this type is identified in the Tabular List by the use of italic type and by the printed instruction "Code also underlying disease." It is identified in the Alphabetic Index by the use of the second code in slanted brackets and italic type. The first code identifies the underlying condition (etiology) and the second italicized code identifies the manifestation listed. Both codes must be assigned.
